Gross Domestic Product, Second Quarter 2013 (First Preliminary)

Technical Note:

(1) Main Factors of the Revision from the First Preliminary to the Second Preliminary

In the second preliminary, the estimates of demand components of the first preliminary will be revised due to the incorporation of newly available and revised source data. The main items are as follows.

<Original Series>

➤ Private Non-residential Investment

First Preliminary:

Estimated by using supply-side source data.

Second Preliminary:

Estimated by combining the demand- and supply-side estimates. The former is based on “Financial Statements Statistics of Corporations by Industry” (Ministry of Finance), and other sources. The latter is based on the supply-side source data. (Notice that the supply-side estimates will be revised due to the addition and the revision of source data.)

➤ Private Inventory

First Preliminary:

As for materials and supplies inventory and work-in-progress inventory, original net increases of both nominal and real series are estimated by ARIMA models used for seasonal adjustment.

Second Preliminary:

Materials and supplies inventory and work-in-progress inventory will be estimated based on “Financial Statements Statistics of Corporations by Industry.” (Notice that the estimates of finished goods inventory and retail trade inventory will be revised due to the addition and revision of source data.)

➤ Addition and Revision of Source Data

First Preliminary:

Missing source data are extrapolated. Preliminary source data are used where final data are not yet available. (In the first preliminary, source data that were available by the release of the third month’s “Balance of Payments (Preliminary)” were incorporated in the estimation to the greatest extent possible.)

Second Preliminary:

The extrapolated data at the first preliminary will be replaced by actual source data if available. Revised or retroactively revised source data will be used if available. (In the second preliminary, source data that will be available by the release of the most recent “Financial Statements Statistics of Corporations by Industry” will be incorporated in the estimation to the greatest extent possible.)

<Seasonally Adjusted Series>

Due to the concurrent seasonal adjustment applied to the newest original series, the seasonally adjusted series were revised from the first quarter of 1994 to the most recent quarter.

(2) Other Issues

The first preliminary estimates incorporated the following revision in source data in addition to the regular update of source statistics.

➤ Incorporation of the Retroactive Revision in the Basic Source Data

The revisions in the basic source data were incorporated as follows.

Revised source data	Revised periods in the preliminary estimates	Date released	Affected components in the preliminary estimates
Indices of Industrial Production	From January-March 2011	June 2013	Supply-side estimates
Current Survey of Production	From January-March 2011	July 2013	Supply-side estimates
Index Numbers of Commodity Price of Agriculture	From January-March 2012	June 2013	Supply-side and Deflators estimates
Monthly Economic Report on Land Infrastructure and Transport	From April-June 2012	July 2013	Supply-side estimates
Corporate Services Price Index	From April-June 2012	June 2013	Deflators estimates
