Gross Domestic Product, Fourth Quarter 2013 (Second Preliminary)

Technical Note:

(1) Main Factors of the Revision from the First Preliminary to the Second Preliminary

From the first preliminary to the second preliminary, some figures were revised due to the incorporation of newly available and revised source data. The following explains the main revisions in the expenditure series.

<Original Series>

➤ Private Non-residential Investment

First Preliminary:

Estimated by using supply-side source data.

Second Preliminary:

Estimated by combining the demand- and supply-side estimates. The former is based on “Financial Statements Statistics of Corporations by Industry” (Ministry of Finance), and other sources. The latter is based on the supply-side source data.

➤ Private Inventory

First Preliminary:

As for materials and supplies inventory and work-in-progress inventory, original net increases of both nominal and real series were estimated by ARIMA models used for seasonal adjustment.

Second Preliminary:

Materials and supplies inventory and work-in-progress inventory are estimated based on “Financial Statements Statistics of Corporations by Industry.”

➤ Addition and Revision of Source Data

First Preliminary:

Missing source data were extrapolated. Preliminary source data were used where final data had not yet been available. (In the first preliminary, source data that were available by the release of the third month’s “Balance of Payments (Preliminary)” were incorporated in the estimation to the greatest extent possible.)

Second Preliminary:

The extrapolated data at the first preliminary are replaced by actual source data if available. Revised or retroactively revised source data are used if available. (In the second preliminary, source data that are available by the release of the most recent “Financial Statements Statistics of Corporations by Industry” are incorporated in the estimation to the greatest extent possible.)

<Seasonally Adjusted Series>

Due to the concurrent seasonal adjustment applied to the newest original series, the seasonally adjusted series were revised from the first quarter of 1994 to the most recent quarter.

(2) Other Issues

The first preliminary estimates incorporated the following revision in source data in addition to the regular update of source statistics.

- Estimation for materials and supplies inventory and work-in-progress inventory in the First Preliminary of January-March 2014

With the information used for the Second Preliminary of October-December 2013, the difference from the previous period for seasonally adjusted real series of material and supply inventory and work-in-progress inventory in the First Preliminary of January-March 2014 is estimated as 81.8 billion yen. (For that estimation, the original series are estimated by ARIMA models used for seasonal adjustment.)

Please be noted that newly available information is added in the estimation of material and supply inventory and work-in-progress inventory in the First Preliminary of January-March 2014.
