

## (Supplementary Material) Specifications for Seasonal Adjustment

(i) X12-ARIMA is employed for seasonal adjustment and it allows various specifications such as choice of regressors and selection of ARIMA models. The selection of optimal models is conducted under criteria such as AIC.

(ii) While the specifications for seasonal adjustment are reviewed regularly at the timing the Annual Estimates are incorporated, they may also be revised along with other addition and revision of source statistics.

(iii) The specifications are applied from 1994.1 to 2019.4, and parameter MAXLEAD is set to 8 and parameter MAXBACK to 0 for X12-ARIMA.
